General Comment

As a mother and as a concerned citizen, I urge you not to allow the use of toxic chemicals such as Glyphosate in the production of our food supply, on the side of our roads, on school, church, and hospital lawns etc. The WHO has evaluated all presented data and has deemed Glyphosate a probable human carcinogen. Many mothers across this nation have had their breast milk tested and contrary to what we were led to believe, glyphosate has been found to bioaccumulate and be present in mother's breast milk, as well as the urine of farm workers. Our nation's health is at all time lows and our children are in a health epidemic across this country with cancer, diabetes and autism on a steep rise. BumbleBees have been nominated to be placed on the endangered species list. We have seen a huge decline in the butterfly population. Glyphosate has recently been found contaminating baby food, organic honey, vaccines, feeding tubes and many many other food products that we and our children consume every day. I urge you not to allow the use of this hazardous chemical any further. The evidence is clear. The United States must follow the example of other countries around this world and stop the use of Glyphosate. Some startling facts are that the USA is last in the health of the top 17 most developed countries. Out of the top developed countries, the USA is #1 for infant death in the first day. 1 out of every 2 children today lives with chronic illness. Half of all American Men and one third of all American Women are expected to get cancer as of now. It is time the US became a world leader and put its people's health, and the well being of this planet before the profits of corporations. Thank you.
